Using SmsSender

The easiest way to send an SMS is by using the SmsSender class. It contains factory methods like getClickatellSender and getGsmSender that creates a connection towards the sms gateway. It also contains some methods like sendTextSms and sendWapSiPush that makes it easy to send these types of messages.

Example: You want to send a simple text message using the clickatell sms gateway.

```
// Send SMS with clickatellSmsSender smsSender = SmsSender.getClickatellSender("username", "password", "apiid");// The message that
```

Using the low level API

The other way to send a message is by first loading a transport using the SmsTransportManager and then create a message using one of the SmsMessage classes.

Example: You want to send a simple text message using the clickatell sms gateway.

```
// The username, password and apiid is sent to the clickatell transport// in a PropertiesProperties props = new Properties();props.
```
